

OCEAN LIFE

The sea where the earliest single cell organisms were said to emerge in times before time is for all on earth the preserve of the origin to life. It was that goddess whom the sailors loved, and in story was that from which the first gods rose. It is the blue which we see from the immeasurable distance in space, and that light is the faint call in the fullest hope for contact, this cradle of life. To have raised that nearly infinite variety of life forms, each so precious, had taken the kind of beneficence and intelligence we know of only lightly as that care only from God is made. These recent times had seen the loss of knowledge about the realities of that track in time so much of life has been to multiply and realize the mandate of life in that water. Furthermore, our passivity to manage and inform each other on the significance of the oceans for all life on earth becomes a recipe for its disregard. Proposals for assembly world wide to save earth must include the international agreement for its protection.

T-SHIRT SAYS REMAIN CALM

“At any event, we find the only detailed description of what he had in mind in letters written in the year 1816, and these letters repeat rather than supplement one another. Jefferson himself knew well enough that what he proposed as the ‘salvation of the republic’ actually was the salvation of the revolutionary spirit through the republic. His expositions of the ward system always began with a reminder of how ‘the vigour given to our revolution in its commencement’ was due to the ‘little republics’, how they had thrown the whole nation into energetic action’, and how, at a later occasion, he had felt ‘the foundations of the government shaken under [his] feet by the New England townships’, ‘the energy of this organization’ being so great that ‘there was not an individual in their States whose body was not thrown with all its momentum into action’. Hence, what they had been able to do during the years of revolution, namely, to act on their own and thus to participate in public business as it was being transacted from day to day.” In this passage by Hannah Arendt in *The Revolutionary Tradition and Its Lost Treasure*, it is stated that our present did find preceding incidence for which triumph was reached.

DREAM CRAFT

Art has always been a high calling. To many, it was not known that there were those as the forefathers and the ones who safeguard peace for trade in the world at large were in fact artists, who wrote and painted, while applying their artistry in love and care towards the service of the country, the world, and their people. In America, we have always believed in the American Dream. It is one that was held not so much in the materialization of this dream, in so much architecture, art, and literature, but one that was held in our hearts and souls, in our actions, words, and works, and in all the love for our fathers and mothers and children and in all the worship in the Church. Where is this Dream today? It is known that it is becoming stronger and gaining momentum as we face that which we did not before.

CIVITAS

The word “global” is in a state of hyperization today. The appreciation of interaction with peoples of other places by the technologies of transit was one which in prior times occurred slower than today. Would the knowledge be given somehow before the experience, perhaps the luxury of travel would have been of greater priority to signal the great expenditures related to the discovery of differences between cultures. The work to come to an understanding of each our own nations, especially here in America, this nation-state, so that each own people would be with the education of manners and civility to find the most from travelling interaction in truth has only begun. The West just centuries ago was just Europe, and yesterday we could not recall whether America were a new civilization. In these times, recognition emerges that from the older term “the new world” came the American identity of “the free world.” That each civilization and its places have such differences is the actuality to be verified for that their existences are true and respective.

GREENERY FOR A TOWN

Participation by gardeners and townfolks will hopefully continue so that that nature in the civic town of Calgary will not be disregarded for problems appearing more pressing. Many feel that it has taken forever to populate through careful cultivation so many trees, so much grass, and so many other carefully selected plants. Yet, the view by visitors to this hometown continues to be that while there may be more plants here than some towns south of the border, there does not appear to be that many trees as there are in structured parks. Some citizens to Calgary have begun efforts in planting trees and growing herbs in their private lots. There has also been the creation of community gardens in neighborhoods.

PEACE.INFO

About the so called cyber contest, it seems that now there are afloat rumors that a declaration similar to those declaration of wars in legitimate warfare was issued by those not in authority yet still did appropriate the offices of governance by nation-states. The alarm was raised in recent months due to the upsetting and abrupt increase of interest in playing to violate systems that uphold life of decency where crimes are investigated and tried. The interest by people intrigued with capacities of electronic computers did not yet find optimistic and widespread response that contains information through media allowing those intrigued to discover the optimism and idealism with which hardware and software development occurred. The idea that there is heritage to the development of electronic computers and networks has now begun to circulate on the North American continent, but the content that has the knowledge and persuasive power has yet found mainstream development.

NEW TECH AND CONTEXTS

Communication from big energy companies through advertisements published in respectable magazines has indicated that the effort to develop new technologies for tapping alternate energy sources is seeking interest as well as internal structuring to enable the possibilities. The basis for this call is that the companies have been successful in collecting capital to invest. The difficulties they are facing are upon the creation of opportunity inside strict corporate structure that delimits the potential for development to the stage reaching incubator stage. The complexity surrounding the generation of new technology includes the requirements of forum for ideas, the requirements for thinking through an idea, the lack of focused research mapping the possible effects of an application, and the recruitment of talent that can startup and grow teams carrying through research before development. Existing proposals found in public forums have not been catalogued and evaluated for information to the companies.

CURIOUS CASE OF THE MEDALLION COIN

The resettlement effort of an old American family in America is beginning to circulate as news which is somewhat alarming to many Americans, mainly for the difficulty even for a wealthy family to find firm ground to fully settle. The earliest news that became popular was the loss of a “medallion coin”, which was formed or transformed by the patriarch. It was to be given to the child upon graduation of secondary school, where as a student the child graduated first in the class, which was later repeated at Cornell with the *magna cum lauda* title. The coin was lost from the bedside table in 2001, and later, there was a sudden call in that country to do away with the penny, which was realized. In 2003, news arrived to the continent from Europe that old and treasured castles on the continent could be gotten for a penny.

STAND ON GUARD

Despite wide support and cooperation around the world, many locations remain unsure of how to manage the problems which began to receive attention in the late 2000’s, which found even more occurrences in the late 2010’s. As intelligence community begin to work with civil agencies, information generated from analyses and projections is being distributed through different channels in an effort to inform the public on how to investigate and respond to those problems. The need for everyday citizen to become informed and be kept from erring will allow him to protect the country for the future.

EARTH

Classical science is one that reached the annals of literature through rigorous study and immaculate review over the duration that lasted many centuries. Its principles were credited to those thinkers and writers whose contributions were such that they became great. These principles are close to the ideal, and by the scientific discipline, were of the reality that conveys the truth and in those principles we find that harmony in the universe we seek in our enquiry for our place in the universe.

In the free world, the efforts ongoing towards saving the environment is but one instance where we express with each other in the search for principles to be discovered. The search towards the reality that through our own thoughts and actions could be realized is to do with the extraordinary nature of earth as home.

The actuality that we as humans need Earth to be our home, that we need Earth for our survival, is one that needs continued representation by individuals through media and through daily interactions. If we can always remember that Earth is our home, we should soon become humans deserving.
